## **Abstract**

NEREID is a bundle of projects shared between TUM and INSA Lyon.

Our project is a bit peculiar. We are meant to improve Evince, the default PDF reader on Linux (that also works on Windows).

With the initial project, we intended to improve annotations, mainly addind embedded highlighting. This was already done by someone at *Google Summer of code*, therefore we decided to work on hypertext link navigation. We are strongly committed to having the features be accepted by the community.

Being an open-source project, it will be a great experience, which will get a better understanding of the open-source ecosystem. The project also follows up our engineering courses, at TUM as well as at INSA Lyon. Moreover, the code itself is very advanced and will enhance our programming skills.

## Contents

<b>1</b>	<b>Introduction</b>	<b>3</b>
<b>2</b>	<b>Application Scenarios and Requirements</b>	<b>3</b>
<b>3</b>	<b>Description of Architecture and its Components</b>	<b>3</b>
<b>4</b>	<b>Architectural Representation</b>	<b>3</b>
4.1	Architectural Goals and Constraints . . . . .	3
4.2	Use-Case View . . . . .	3
4.3	Activity Diagrams . . . . .	3
4.4	Logical View . . . . .	3
<b>5</b>	<b>Implementation View</b>	<b>3</b>

- 1 Introduction
- 2 Application Scenarios and Requirements
- 3 Description of Architecture and its Components
- 4 Architectural Representation
  - 4.1 Architectural Goals and Constraints
  - 4.2 Use-Case View
  - 4.3 Activity Diagrams
  - 4.4 Logical View
- 5 Implementation View
